(54) Title: AN ACTIVE FILTER

(57) Abstract: An active filter comprising a first stage (10), a second stage (20) and a third stage (30), each of them being provided with a respective operational amplifier (11,21,31); a feedback branch (50) defined by a resistor (51) connects the output (31c) of the third operational amplifier (31) to the inverting input (11a) of the first operational amplifier (11). A main resistor (60) is connected between the inverting input (11a) of the first operational amplifier (11) and a fixed-potential node, and in particular a grounded node.
